### **DETAILED ACTION**

1. This Office Action is the answer to the amendment submitted on 11/29/2006, which paper has been placed of record in the file.
2. Claims 9-19 are pending in this application. Claims 1-8 have been withdrawn.

#### ***Allowable Subject Matter & Reason of Allowance***

3. Independent claims 1, and 23 are patentable distinct over an available reference of Gould et al. because this reference does not disclose an apparatus and a method for monitoring an aircraft accessory, comprising:
  - a memory having stored therein baseline parametric data that was obtained during an acceptance test procedure, the baseline parametric data comprising data relating to aircraft accessory performance; and a processor configured to compare the operational parametric data with the baseline parametric data to determine a relationship between them until a determined relationship signals aircraft accessory wear, then reports that condition.

Gould et al. generally teach a server (12) in the aircraft (11) communicates with a ground based communication system (GBCS) (16) linked to the aircraft manufacturer (26), aircraft component supplier (28) and airline organization (30). The GBCS receives aircraft configuration data from the server. Their invention is for managing manufacture, monitor and maintenance of aircraft. Personnel can remotely monitor real-time status of aircraft system using the aircraft configuration data.

4. Dependent claims 2-22, and 24-32 are patentable because of dependencies of independent claims 1, and 23.

#### ***Conclusion***

5. Claims 1-32 are patentable.
